

Pop Top Roof with the bedding platform lifted for full standing height during the day

## Pop-top Roof for Land Rover Defender 110

What could be more relaxing than to know that you have two comfortable beds after a long day's drive through the outback? A few easy operations and you are ready to relax and enjoy a cold drink at the camp fire, knowing you're ready for the night.

Now in its third generation, the award winning Mulgo Pop-top Roof converts offroad vehicles into comfortable, spacious overnight homes. Built from aluminium, it's light-weight, and the solid construction ensures that the offroad capability of the original vehicle is not impacted.

The full standing height inside your vehicle gives you the added privacy you often miss while camping and superior comfort when the weather is not favourable.

Two aluminium frames, in the colour of your vehicle, form a solid base for the roof. As we use the standard Defender roof we ensure that the conversion fits harmoniously into the overall design of your vehicle and the height only changes slightly to standard measurements.

Pop Top Roof lifts in seconds

## Features

### Easy to Use

Featuring strong gas-struts and two self-locking release latches accessible from the inside, the Pop-top Roof is lifted in seconds. The rigid platform supporting the overnight bed can be lowered independently of the Pop-top Roof, thus allowing full standing height.

### Comfortable Bed for Two

The comfortable mattress measures 130 by 200cm. Your sleeping bags or doonas will remain in place while the roof is down, snugly fitting into the space between the supporting platform and the roof.

The bed frame is made out of an aluminium frame and covered with timber sheets. Supported by gas struts, this frame can be lifted independently of the roof to give you maximum standing height during the day.

### Full Weather Protection

Using high-tech canvas Airtex®, a light-weight, extremely durable and breathable material, and quality seals ensure the vehicle is fully weather tight. Windows on both sides as well as at the back allow sufficient aeration. All windows are covered with mosquito nets, and can be closed from the inside using the Velcro® lining.

### Fuel Efficient

The low profile and integrated, light-weight construction of the aluminium Pop-top Roof ensures that the aerodynamic properties of your vehicle are minimally impacted, thus ensuring that the change in fuel efficiency of your car is not noticeable.

### Look & Feel

The design of the Pop-top Roof is based on the original manufacturers' looks, with all parts of the construction matching your vehicle body colour.

### Pricing

Starting at \$9,500.00 incl GST for the above specifications.

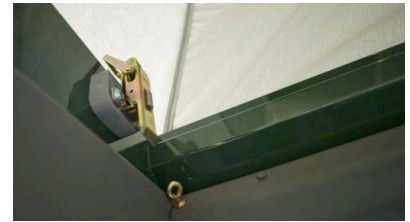

Further customisation to suit your needs is possible. Please contact us for a detailed quote.
